

Since its inception, Tilak has been developing its products in close collaboration with climbers, mountaineers, and other outdoor specialists. These were originally developed by the company's founder. Nowadays there is an extensive team of top athletes from various outdoor sports participating in Tilak's product development and testing processes. One of the best one is featured throughout our catalogue.

tilak[®]

70-77

There are many ways to spend your time outdoors. My main ways are climbing and mountaineering. During my life as a climber, I have been lucky enough to climb in the extraordinary rock-climbing areas of the Czech Republic, the High Tatras, the Alps, Asia, as well as in polar regions and throughout the Americas. Some of my ascents are considered to be of the most difficult routes ever made in those areas. I owe these landmark ascents not only to my own skills, but also to my climbing partners and the high-quality equipment I use: there is no succeeding at the extremes of a sport without equipment that can take the punishment, and Tilak gear is always up for the challenge.

Ideas such as conscientious and sustainable material sourcing, functional design for extreme activities, a respect for nature, and a relentless emphasis on quality brought me and my climbing partners to, and keep us connected with, Tilak.

Dušan „Raiser“ Janák

Dušan "Raiser" Janák has been a member of the Czech national climbing team for a long time. Many of his ascents have been awarded the prestigious "Ascent of The Year" prize, an annual award from the Czech Mountaineering Association in the non-competitive rock climbing and mountaineering categories.

He tends not to focus on indoor climbing or competitions, as he prefers to be outside. He specializes in ascents which, in addition to the intense physical demands of his routes, also require significant mental endurance; all his major ascents contain enough adventurous aspects to create substantial personal challenges.

Such challenges do not necessarily mean climbing in exotic places or reaching a well-known summit. Although Raiser has many significant achievements all around the world, he is also able to find great challenges in his back yard of the High Tatras. His 'Tatras Trilogy' consists of three very notable ascents: the first free ascent of Jet Stream (Jastrabia veža, difficulty 10-/10 E4), a climb which was awarded "The Ascent of The Year" prize, on which Raiser has pushed the free climbing limit in the High Tatras; the first ascent of Matrix (Ušatá veža, difficulty M8/M9 E4), another winner of "The Ascent of the Year" prize, is considered one of the most difficult mixed routes in the High Tatras. Mixed routes are difficult and technical, involving special tools like axes and crampons and demanding a wide variety of climbing skills on rock, snow and ice. The significance and difficulty of his ascents are confirmed by the fact that none have been repeated yet. The last part of Raiser's trilogy is his recent winter ascent of Hazard (Velký Kostol, difficulty 8 / A5), which is considered the most difficult technical route in the High Tatras. Technical routes like Hazard often involve complex and arcane techniques using very specialized equipment, such as sky-hooks, special pitons, rope tricks and other techniques to bypass sections of rock that cannot be free-climbed.

PhDr. Dušan Janák Ph.D. lectures on sociology and social philosophy at Silesian University and also conducts research at the Slovak Academy of Science. He worked at his doctoral thesis not only in libraries but also at the foot of the mighty El Capitan in Yosemite Valley. He took his studies of Ludwig Wittgenstein's philosophy in the Pamir-Altaj base camp, ideal surroundings indeed for such mental work...

MATERIALS

Gore-Tex® Paclite Shell

Gore-Tex® Paclite Shell is windproof, waterproof and releases sweat. Low weight, low volume, soft and easy to pack, Gore-Tex® Paclite Shell suits biking, walking, hiking and other outdoor sports where it 's important to have protection against rain and wind.

Gore-Tex® Pro Shell

This is the newest membrane fabric from Gore-Tex®. It uses a new type of woven backer fabric (GORE™ Micro Grid) to reduce weight and bulk, enhance moisture vapour transportation, and improve tear resistance with maintaining durable waterproofness. This is the ultimate fabric to use in storms in terms of protection, moisture transportation, weight and durability.

Windstopper® Active Shell

These garments combine base layer comfort with outer layer protection. The special construction of the inner layer in combination with the WINDSTOPPER® membrane offers perfect moisture management next to the skin. They are extremely breathable and absolutely windproof.

Windstopper® Soft Shell

WINDSTOPPER® Soft Shell Fabrics combine the soft, comfortable fit of a mid-layer with reliable shell protection against cold wind, light rain and snow. It provides maximum comfort and freedom to enjoy the widest range of activities and weather conditions. They are totally windproof, very breathable, water resistant, snow shedding, abrasion resistant and stretch.

Primaloft® Sport

A breathable and lofty synthetic insulation that is made with ultra-fine fibers and specially treated to be water resistant. Primaloft® Sport gives great thermal insulation to help the body maintain its temperature, minimizing energy loss. Extremely light and soft, it was originally developed by the US Army to replace natural down. As down absorbs moisture, it becomes wet and loses its thermal-insulating abilities. Primaloft® absorbs three times less water, is 14% warmer when dry and 24% warmer when wet, than the competitive insulations.

Polartec® Power Shield®

Tightly woven nylon exterior face fabric laminated to an inner insulation layer that transports moisture away from the body. The 4-way stretch allows for full range of motion. The fabric blocks 98% of the wind, is water repellent and highly breathable for active sports.

Polartec® Power Stretch®

This material is elastic fleece with a high level of thermo-regulation. It's very light and breathable and doesn't absorb body moisture.

LAYERING SYSTEM OF CLOTHING

To feel comfortable in the outdoors, appropriate clothing is a must. While choosing clothing suitable for the intended level of exertion and the expected weather, we should remember that it may be necessary to make changes according to the weather or the intensity of activity. Modern functional clothing systems usually consist of three layers, which together resist weather conditions, regulate heat and moisture transmission, and allow the body to stay as comfortable as possible in any situation.

Absorption layer

The absorption layer transports moisture (i.e. perspiration) away from the body. It is made of synthetic non-absorbent fibres and is in direct contact with the skin. Proper wicking of moisture away from the skin is an essential requirement of technical clothing, and without it, the entire system may be compromised.

Insulation layer

The insulation layer reduces heat loss and is breathable so that water vapor condensation is minimized. In some cases it also functions also as a top layer. In these cases, more emphasis may be put on its "windproofness" and water resistant qualities.

Top layer

The waterproof qualities of the top layer protect against unfavorable weather conditions (rain, snow, etc.). The top layer is also breathable and therefore protects the interior layers against the accumulation of moisture. It must also provide sufficient wind protection.

The properties of outdoor clothing

The waterproof qualities of the top layer protect against unfavorable weather conditions (rain, snow, etc.). The top layer is also breathable and therefore protects the interior layers against the accumulation of moisture. It must also provide sufficient wind protection.

WARRANTY CERTIFICATE

Any defects in materials or workmanship are covered by a four-year warranty. Warranty does not cover changes in product quality caused by improper use or care. Claims or complaints should be made directly to the shop from where the product was purchased as soon as defects are noticed.

CARE INSTRUCTIONS

Please follow the instruction symbols shown on the inner label of each product. While washing we recommend using original products approved for each kind of clothing.

For more information, please see the website www.gore-tex.com

THE POWER OF DETAIL

It is no stretch to say that a product's overall quality is only as good as its weakest link, and that's why we pay constant attention to every detail. Detailed descriptions of products with photos can be found on our website www.tilak.cz. The technological methods listed below are typical for all our products.

A/ GORE Micro Tape

All our three-layer garments use only 13 mm seam tape instead of the standard 22 mm. This means less weight, less volume, better breathability, and an overall increase in garment comfort.

B/ Seam Allowances

Using 13 mm tape means our seam allowances measure only 2.5 mm instead of the standard 6 mm.

C/ Seam quality

Amman thread and a stitch count of 5 stitches per 1 cm means exceptional seam quality and reliability.

D/ WaterTight™ zippers and Zipper garages

After years of use and experience this type of construction is standard in all our Hard and Soft Shells.

E/ Lamination Technology

Lamination of the WaterTight™ zippers instead of sewing results again in less weight, less volume, and higher breathability.

F/ Laminated Powderskirt and Stitchless Waist-draw

One more elimination of stitching and taping provides another advantage in weight and volume, as well as fewer opportunities for leakage.

G/ Stocko Flex Fix

The absolute state-of-the-art in press button technology: waterproof press buttons with patented Flex Fix system. Fifty thousand uses guaranteed.

H/ Stitchless laminated inner pocket

I/ Detail of Sleeve

Cuff Velcro™ adjustment of the sleeve.

J/ Ultrasonic Welding

„Edge to edge“ ultrasonic welding. The seam is sealed by reinforced tape.

K/ Soft Eyelet

Czech Mountain Guide Association (CMGA)

Tilak supplies members of the Czech Mountain Guide Association (CMGA), a member of the International Federation of Mountain Guides Associations (UIAGM)). Tilak is proud that CMGA's guides rely on its gear.

Czech Mountain Leader Association

Tilak is partner of the Czech Mountain Leader Association (CMLA), a member of Union of International Mountain Leader Associations (UIMLA).

Sigurd Felde (Norway)

Sigurd is a mountain guide and highly skilled mountain climber. He has climbed on all seven continents, and was a member of the first Norwegian expedition that tried to climb K2.

ABOUT TILAK

Tilak is an expression about 3,500 years old and it means a mark (tilaka) or a spot (tika) placed on the forehead between the eyes in Sanskrit. In ancient India it was burnt into the body as a caste-mark and it also served to mark property. In our era it has gained a spiritual meaning. The red dot between the eyebrows may symbolise the third eye of the Hindu God Shiva. A tilak is applied to convey wisdom and safety; when , wearing a tilak, you receive the benevolent protection of the gods. Wearing Tilak gear, you are under our protection. It is a word with a grand history and spiritual meaning and a line of outdoor clothing that protects you like no other.
